Back Up Your Files

Cloud Storage

Store copies of your data in the cloud. Services like Google Drive, Dropbox, or iCloud provide secure servers where you can upload files. Regularly sync all your documents, photos, and project files. This ensures they're safe from local disasters.

External Hard Drives

Invest in a good external hard drive. Use it to create full backups of your system drive once a week. Always keep the backup outside your main living area -- if there's an issue with your home, you still have your data.

Software Synchronization

Many programs offer automatic cloud sync. Turn it on for documents, photos, and work files. This continuous backup happens in the background. Check settings to make sure everything is set correctly.

Regular Checks

Review your backups monthly. Verify that you can restore files from a backup. Update your strategies as needed -- new hardware might change what you need to back up.
